

If you are facing difficulty accessing the real Swiggy APIs due to CORS issues, region restrictions, or simply not knowing how to extract data from the network tab.

To solve this, we've created **custom mock API endpoints** that return the same structure as Swiggy's original data.

These endpoints are easy to use and allow you to complete the course smoothly, without relying on the actual Swiggy API.

Here are the 3 example endpoints you can directly use with `fetch()` or `axios` in your React app.

1. <https://pastebin.com/raw/0QcdEDBL>
2. <https://swiggy-api-4c740.web.app/swiggy-api.json>
3. <https://raw.githubusercontent.com/namastedev/namaste-react/refs/heads/main/swiggy-api>

These endpoints return JSON data that is exactly similar to the structure of Swiggy's API responses. The data might slightly differ from what we see in the video as the API response may change from time to time.

If you have any queries, feel free to reach out to us at [support@namastedev.com](mailto:support@namastedev.com)

Happy Coding 😊
